Amendments to the Claims:

- 1. (Currently Amended) A release liner comprising:
 a substrate having opposing surfaces; and,
 a radiation curable silicone release coating in an organic solvent absent a crosslinkable silicone
 hydride resin, coated onto a surface thereof, said the coating, when cured, comprising no more than
 about 1.5 micrograms per square centimeter total silicone extractables.
- 2. (Previously Amended) The release liner of Claim 1, wherein said coating comprises no more than about 0.9 micrograms per square centimeter total silicone extractables.
- 3. (Previously Amended) The release liner of Claim 2, wherein said coating comprises no more than about 0.2 micrograms per square centimeter total silicone extractables.
- 4. (Original) The release line of Claim 1, wherein said coating further comprises no more than about 10 ppm volatile compounds.
- 5. (Original) The release liner of Claim 4, wherein said coating comprises no more than about 2.0 ppm volatile compounds.
- 6. (Original) The release liner of Claim 1, wherein said coating further exhibits substantially no transfer of uncured silicone to adjacent surfaces.
- 7. (Original) The release liner of Claim 1, further comprising a second release coating on a surface of said substrate opposite said radiation cured silicone release coating.
- 8. (Original) The release liner of Claim 7, wherein said second release coating also comprises no more than about 1.5 micrograms per square centimeter total extractables.
- 9. (Original) The release liner of Claim 1, wherein said substrate comprises a polyolefin coated paper.
- 10. (Original) The release liner of Claim 1, wherein said substrate comprises a polymer film.
- 11. (Original) The release liner of Claim 10, wherein said polymer film comprises a film selected from the group consisting of polyolefin, polyester, polyvinyl chloride, polyamide, polystyrene, co-polyester, polycarbonate, and polyketone films.
